

Victor Nguyen

Frontend Software Developer

Profile

I'm a recovering Development Manager who left a life of meetings to rejoin the front line as a developer. I like playing with JavaScript and am currently, and unashamedly, in love with the React ecosystem.

- Obsessed with doing things *The Right Way*™
- Believes in the difference little details make
- Really into developer workflow and tooling
- Just a hard-working, honest and ethical guy

Employment History

Senior Interactive Developer (Contract) at Publicis Sapient

February 2019 - May 2019 Melbourne

Feature development for insurance provisioning software. It was a React, Redux, Flow, Jest codebase that used Sitecore JSS to integrate with a headless Sitecore instance. Interesting project, ask me about it!

Software Developer at Marketplacer

May 2017 - August 2017 Melbourne

I joined to help implement modern frontend practices into their Rails-based platform. Unfortunately, my time there was cut short due to a medical issue.

Senior Frontend Developer (Contract) at Deloitte

October 2015 - April 2017 Melbourne

Joined an internal product team to lead the client-side development of a "cloud accounting" software project. The stack was about as hipster as it got at the time: React, Redux, CSS Modules, Webpack, Jest, Node.

Software Developer at REA Group

July 2015 - October 2015 Melbourne

My time at REA was relatively short (my choice — ask me about it), but hugely influential in my growth as a software developer.

Senior UI Developer (Contract) at CGU Insurance

October 2014 - July 2015 Melbourne

Frontend Developer (Contract) at Isobar

July 2014 - October 2014 Melbourne

Frontend Developer (Contract) at Reactive

March 2014 - May 2014 New York

Frontend Developer to Frontend Development Manager at Igloo

January 2008 - February 2014 Melbourne
